

Consumer Note: Packaging Recycling for Energy Power Systems Australia

At Energy Power Systems Australia (EPSA), we are committed to sustainability and reducing our environmental impact. As part of this effort, we encourage all customers and stakeholders to be mindful of how they dispose of packaging materials related to our products.

1 Why is Packaging Recycling Important?

Packaging materials such as cardboard, paper, plastics, and metal not only protect products during transit but also represent an important opportunity to reduce waste and conserve resources. Recycling these materials helps to lower energy consumption, decrease pollution, and reduce the amount of waste sent to landfills.

2 What Types of Packaging Can Be Recycled?

At EPSA, we use a variety of materials to pack and ship our products safely. The good news is that many of these materials can be recycled:

- **Cardboard & Paper:** Clean, uncoated cardboard and paper can be recycled through curbside or business recycling programs.
- **Plastics:** Most rigid plastics (like PET, HDPE) can be recycled. However, please check for recycling symbols and local recycling guidelines.
- **Metal:** Metal materials such as aluminium or steel can be recycled, but they must be free of contaminants.
- **Wood:** For larger shipments, wooden pallets or crates may be used. These can often be reused or recycled depending on local facilities.

3 How Can You Recycle EPSA Packaging?

1. **Sort the Materials:** Separate packaging materials such as cardboard, paper, plastics, and metals. This helps ensure that each type is processed correctly.
2. **Clean the Packaging:** Make sure the materials are clean and dry. Contaminated items can compromise the recycling process.
3. **Check Local Recycling Guidelines:** Different regions may have specific rules on what can be recycled. Always refer to your local council or recycling provider's guidelines to avoid contamination.

4 EPSA's Commitment to Sustainability

We are continuously improving our packaging processes to minimize waste and increase the use of recycled and recyclable materials. We are actively working toward reducing our carbon footprint, and recycling packaging materials is a key part of this effort. By recycling the packaging that arrives with your EPSA products, you're helping us move closer to a more sustainable future.

5 Additional Information

If you have any questions about our packaging or recycling initiatives, feel free to reach out to our customer support team at epsa@energypower.com.au. We're here to help!

Thank you for your support in creating a more sustainable Australia.
